

## How To Measure Your Job

All turf products are manufactured in 15 ft wide rolls and lengths can be cut to suit your project.

Rolls need to be laid out so the grain of the grass is leaning toward the main point of view.

The lay out below will require three rolls of turf.

15x21, 15x26 and a 15x36

Always order one more foot in length than measurements call for.

This diagram also tells us that we need 65 LF of seaming material, two gallons of glue, as well as 140 LF of bender board.
